

# [SHIVAM SOFTWARE]

Date: 01/02/2020

Guide: Ms. Ginumol Joseph

## 1. Project Overview?

SHIVAM SOFTWARE package is a highly scalable product for Hindus. It offers a complete automation of booking various pooja, hall for various occasions and Ramayana Reading. It can also used for donate money for various functions in the temple. Shivam system software is excellent in pooja booking, hall booking, and booking Ramayana reading and donates money for various functions. Users can also view the shanthi details. The main goal of developing this system is simply because the current system follows manual operations. Manual operations cause so many drawbacks. The main drawbacks are time consuming, it takes more effort and physical space to keep track of paper documents when mistakes are made or changes or corrections are needed, often a manual transaction must be completely redone rather than just updated. The aim of proposed system is to develop a system of improved facilities. The system provides proper security and reduces the manual work. The customers can place their booking and do transaction's online. . The proposed system provides high security, high speed and Greater efficiency.

## 2. To what extend the system is proposed for?

The proposed system is defined to meet all the disadvantages of the existing system. It is necessary to have a system that is more users friendly. In our proposed system there is admin who can view all the users and booking details. This system allows users to use online payment method for their transactions and bookings. Users of this proposed system are admin and user. The aim of the proposed system is to develop a system of improved facilities. The system provides proper

security. This system can reduce the amount of paper works and also make bookings online and view shanthi details.

3. Specify the Viewers/Public which is to be involved in the System?

The main viewers of the system rather than admin is user manage. User can interact with the institute through the system. Admin is one who holds whole control of the system. The temple administrator is the admin to the proposed system.

4. List the Modules included in your System?

- The admin module is dealing with the control activities of the system.
- The user module includes the bookings and donations. They can manage their account through this website.

5. Identify the users in your project?

- Admin
- User

6. Who owns the system?

Dhevasamboard is the owner of the system.

7. System is related to which firm/industry/organization?

The system is related to a Mahadheva Temple. This system is used mainly for bookings.

8. Details of person that you have contacted for data collection?

Mr. Shajimon V S  
Valiyaveetil  
karinilam

9. Questionnaire to collect details about the project? (min 10 questions, include descriptive answers, attach additional docs (e.g. Bill receipts, certificate models), if any?)
